

RIMMA Community

Risk Information Management, Risk Models and Applications

your challenges:

- complexity of actors and organizations
- cross-domain knowledge transfer and operational implementation of R&D results
- coherence generation for conventions, directives and programs
- transition from static data models to dynamic process specifications and implementations for cross-organizational just-in-time decision and action support

our aims:

- promoting effective information management methods and techniques to be applied in Security as well as in NaTech Risk operational practice
- justify the need of joint information governance for the UN SENDAI Framework national and regional implementations
- generate value-adding information synergies based on multi-stakeholder strategies and interrelated roadmaps
